```
Activity is found to be vulnerable to StrandHogg 2.0 task hijacking vulnerability. When vulnerable, it is possible for other applications
to place a malicious activity on top of the activity stack of the vulnerable application. This makes the application an easy target for
phishing attacks. The vulnerability can be remediated by setting the launch mode attribute to "singleInstance" and by setting an empty
taskAffinity (taskAffinity=""). You can also update the target SDK version (22) of the app to 29 or higher to fix this issue at platform
level.
